1. EXECUTIVE SUMMARY

1.1 EXECUTIVE SUMMARY CROPS

1.1.1 The 2018/2019 season was characterized by late on-set of rains across the country and false-starts in the southern and south-eastern parts of the country, this affected the crop establishment. Long dry spells in January and February negatively affected the planted crop.

1.1.2 Cyclone Idai, which hit the country in mid-February, caused severe damage to crops and agriculture infrastructure in Manicaland and Masvingo provinces. However, it improved crop condition in Mashonaland East and Central.

1.1.3 The estimated maize production stands at **776 635 MT** which is **54%** less than the **1 700 702 MT** obtained during the 2017/18 season.

1.1.4 Sorghum and millet production for the **2018/19** season is estimated at **75 209 MT**. Sorghum production is expected to be **40 215 MT**, finger millet **6 947 MT** and pearl millet **28 047 MT**.

1.1.5 The combined small grains production decreased by **44%** compared to 2017/2018. Several dry spells experienced this year affected the regions where significant areas are put under small grains.

1.1.6 Cereal production is **851 844 MT** against a national cereal requirement of **1 754 225 MT** for human consumption. Cereal requirement for livestock is estimated at **350 000Mt**.

TABLE 1: Grain and Cereal Production Compared to National Requirements in Metric Tonnes

Requirements(MT)		Available Grain and Cereals(MT)		Surplus/Deficits(MT)
¹ Human	1 754 225	Maize	776 635	
Livestock	450 000	Small Grains	75 209	
Stocks at GMB(<i>as at 2 May 2019</i>)			591 049	
Total	2 204 225		1 442 893	-761 332

¹Human consumption is computed from a consumption rate of 120kg/person/year and a national population estimate of 14 618 538

1.1.7 Mashonaland West and Central have substantial surplus cereal production while Masvingo and the Matabeleland provinces have a deficit.

1.1.8 Out of the **60** administrative rural districts in the country, **11** (18%) have enough cereal to last until the next harvest and the rest (49 districts) will last between 2 and 11 months.

1.1.9 Maize average yields decreased by **51%** to **0.48t/ha** in the current season from **0.99t/ha** in the 2017/2018 season. The yield ranges from **0.27t/ha** in the communal sector to **1.8 t/ha** in the A2 sector.

1.1.10 Cotton production is estimated at **66.5 million kgs** compared to **130.3 million kgs** in 2017/2018 season

1.1.11 Tobacco production is estimated at **185.7 Million kgs** compared to **252.6 Million kgs** in 2017/18 season

1.1.12 Soyabean production is at **60 068 MT** compared to **59 772 MT** in 2017/18 season.

- 1.1.13** Groundnut production decreased by **44%** from **127 202 MT** in the 2017/18 season to **70 902 MT** this season.
- 1.1.14** Production of pulses and tubers remains very low. This season, sugar beans increased by **55%** from **21 320MT** to **9 528 MT** while cowpeas decreased by **23%** from **16 380 MT** to **12 655 MT**. Sweet potatoes decreased by **73%** from **321 662MT** to **88 248 MT**.
- 1.1.15** The huge decrease in the production of tubers and legumes is a result of erratic rainfall at the beginning of the season and long dry spells in January when these crops are normally planted.

1.2 FOOD CROP PRODUCTION ESTIMATES (MT)

TABLE 2: FOOD CROP PRODUCTION ESTIMATES (MT)

Crop	2018/2019	2017/18	%
Maize	776 635	1 700 702	-54
Sorghum	40 215	77 514	-48
Pearl Millet	28 047	48 844	-43
Finger Millet	6 947	9 085	-24
Groundnut	70 902	127 202	-44
Round Nut	29 396	47 594	-38
Sweet Potato	88 248	321 662	-73
Sugar Beans	9 528	21 320	-55
Cowpeas	12 655	16 380	-23

1.3 EXECUTIVE SUMMARY LIVESTOCK

- 1.3.1 Generally, the body condition for all livestock classes ranged from fair to good in all districts.
- 1.3.2 Grazing is available to last from four months to eight months in most districts, except in some districts in Matabeleland North, Matabeleland South and Masvingo where grazing is expected to last for up to **3 months**.
- 1.3.3 Water for livestock was available in most districts as a result of Cyclone Idai -induced rains which improved the water situation in most water bodies in Mashonaland provinces, Manicaland and parts of Masvingo and Midlands provinces
- 1.3.4 However, there are some areas in Matabeleland North, Matabeleland South, parts of Masvingo and Midlands provinces that may experience inadequate supplies before the next rainy season
- 1.3.5 Dipping is generally erratic due to a critical shortage of dipping chemicals, with priority in the allocation of the chemicals being given to areas that were severely affected by the outbreak of Theileriosis with over **50 000** cattle deaths reported in areas like Goromonzi, Chivhu, Bindura, Buhera, Hwedza, Gutu, and Mhondoro-Ngezi.
- 1.3.6 The national calving rates remain very low and are ranging from **38%** in communal areas to **45%** in the large scale commercial sector against a national target of **60%**.
- 1.3.7 Regulated livestock markets which offer the best returns are mainly found in the Matabeleland provinces. In other provinces, most of the livestock is being sold through open markets.
- 1.3.8 The number of beef cattle slaughtered increased by **2%** from **261 191** in 2017 to **266 220** in 2018.

- 1.3.9 Annual milk production has continued on an upward trajectory since 2015 as the national dairy herd continues to grow. Total production in 2018 rose by **13.6%** to **75.4 million** litres up from **66.4 million** litres in 2017.
- 1.3.10 The major tick-borne diseases reported were Babesiosis, Anaplasmosis, Heart water and Theileriosis. The diseases case was fatality rates were for Babesiosis **36%**, for Anaplasmosis **21%**, for Heart water **35%** and for Theileriosis **66%**.
- 1.3.11 FMD originating from Mozambique was detected in the north-eastern part of the country (Rushinga) for the first time and eventually spreading into seven of the nine Mashonaland Central districts, Mashonaland East's Mudzi and UMP districts and some few locations in Hurungwe and Makonde districts in Mashonaland West province.
- 1.3.12 Cumulative pig slaughter figures for 2018 were **173 694** which is **12%** higher than the 2017 figure of **155 181**.
- 1.3.13 The goat kidding rate stands at **98%** against **120%**.
- 1.3.14 The sheep lambing rate stands at **65%** against the national target of **100%**.

2. FOOD AND CASH CROP PRODUCTION COMPARED TO HUMAN REQUIREMENT

2.1 GRAIN, TUBERS AND PULSES PRODUCTION COMPARED TO REQUIREMENT

TABLE 3: CEREAL GRAIN, TUBERS AND PULSES PRODUCTION COMPARED TO NATIONAL REQUIREMENTS

Crop	Requirements (MT)	Available Food (MT)	Surplus/Deficits (MT)
¹ Cereal (<i>Maize, sorghum, pearl and finger millet</i>)	2 204 225	1 442 893	-761 332
² Groundnut	101 217	70 902	-30 315
² Roundnut	130 136	29 396	-100 740
² Sugarbean	101 217	9 528	-91 689
² Cowpeas	86 757	12 655	-74 102
² Sweet Potato	303 651	88 248	-215 403

¹Cereal requirement is computed from a consumption rate of 120kg/person/year and a national population (2012 Census factoring in growth rate) of **14 459 553** (*consumption range being 100-140kg/person/year*). ²Other crops requirement is based on 2100Kcal requirement per person per day and calculated from the ZimVac Household Economy Approach Baseline Survey 2009/10 for 25 Livelihood Zones across Zimbabwe. Groundnuts 7kg/person/year, Roundnuts 9kg/person/year, Sweet potato 21kg/person/year, Sugar beans 7kg/person/year, Cowpeas 6kg/person/year,

The above requirements are for human consumption. Cereal requirements for livestock are estimated at 450 000MT per year.

FIGURE 1: CEREAL GRAIN, TUBERS, PULSES AND OTHER CROPS PRODUCTION COMPARED TO NATIONAL REQUIREMENTS

2.2 CEREAL SUFFICIENCY BY DISTRICT

TABLE 4: CEREAL SUFFICIENCY (MONTHS) FOR DISTRICTS

Province	0-3 Months	4-6 Months	7-9 Months	10-12 Months	More than 12 months
Mashonaland West		Kariba, Mhondoro-ngezi	Hurungwe	Sanyati	Chegutu, Makonde, Zvimba
Mashonaland Central		Mbire	Mt Darwin, Rushinga Shamva		Muzarabani Mazowe Guruve, Bindura
Mashonaland East		UMP, Mudzi, Mutoko		Goromonzi, Marondera Murehwa	Chikomba, Seke, Hwedza,
Manicaland	Chimanimani Mutare Chipinga	Buhera ,Mutasa Makoni, Nyanga			
Midlands	Mberengwa	Gweru, Gokwe North, Shurugwi, Zvishavane	Gokwe South Kwekwe		Chirumhanzu,
Masvingo	Bikita, Chiredzi Chivi, Mwenezi	Masvingo	Zaka	Gutu	
Matabeleland North	Hwange, Binga Lupane, Nkayi, Tsholotsho	Umguzo	Bubi		
Matabeleland South	Beit-Bridge, Bulilima Mangwe Gwanda Umzingwane,	Matobo		Insiza	

2.3 CEREAL (MAIZE AND SMALL GRAINS) PRODUCTION VERSUS CONSUMPTION REQUIREMENT

TABLE 5: CEREAL (MAIZE AND SMALL GRAINS) SUFFICIENCY FOR PROVINCES

Province	Population	Production(Mt)					(Mt)	
		Maize	Sorghum	Pearl Millet	Finger Millet	Total Cereal	Requirement	Surplus/deficit
Mashonaland West	1 659 272	228 073	1 579	27	330	230 009	199 113	30 897
Mashonaland Central	1 264 031	159 184	10 242	780	150	170 356	151 684	18 675
Mashonaland East	1 530 095	153 831	5 410	953	1047	161 242	183 611	-22 368
Manicaland	1 915 519	51 070	3 388	8 428	1 520	64 406	229 862	-165 456
Midlands	1 755 083	93 703	8 993	2445	732	105 874	210 610	-86 424
Masvingo	1 818 370	60 962	5 231	6847	3161	75 897	218 204	-142 307
Matabeleland North	778 196	13 031	2 655	5730	0	21 416	93 384	-71 968
Matabeleland South	712 933	16 781	2 717	2836	7	22 341	85 552	-63 208
Harare	2 465 699	0	0	0	0	0	295 884	-295 884
Bulawayo	719340	0	0	0	0	0	86 321	-86 321
Total	1 4618 538	776 635	40 215	28 047	6 947	851 844	1 754 225	-902 381

FIGURE 2: CEREAL (MAIZE AND SMALL GRAINS) SUFFICIENCY FOR RURAL WARDS

2.4 PRODUCTION ESTIMATES FOR CASH CROPS (MT)

TABLE 6: PRODUCTION ESTIMATES FOR CASH CROPS (MT)

CROP	2018/2019	2017/2018	%
Tobacco	185 725	252 604	-26
Cotton	66 564	130 342	-49
Soya bean	60 068	59 72	1

3. SEASON PERFORMANCE

3.1. DRY SPELLS

- 3.1.1. A long dry spell was experienced in the Southern and South-Eastern parts of the country beginning end of December into January, resulting in poor crop establishment and repeated replanting.
- 3.1.2. More dry spells were experienced in most parts of the country lasting for up to 28 days from mid- January to mid- February severely affecting the maize crop at reproductive stage as well as other maize crop which had been top-dressed.

3.1 Cyclone Idai

- 3.2.1 In Manicaland, the cyclone caused extensive loss of life and damage to crops, livestock and infrastructure.
- 3.2.2 Cyclone-induced heavy rains caused extensive damage to most of mature crops in upland areas of Chipinge and Chimanimani as well as flooding in Buhera in Manicaland
- 3.2.3 Access to most basic services was disrupted as well as access to market for agriculture produce
- 3.2.4 Communication and transportation was disrupted due to damaged roads and infrastructure
- 3.2.5 Irrigation infrastructure was severely damaged negatively affecting the cropping cycle
- 3.2.6 In Masvingo, the cyclone affected Chiredzi, Bikita, Zaka, Gutu and Masvingo districts. Almost all wards in the affected districts received very high rainfall during cyclone period.
- 3.2.7 Destruction includes homesteads, crops and livestock, and 2 irrigation pumps at St Joseph irrigation scheme in Chiredzi. A total of **115** wards were affected, **684** households left homeless
- 3.2.8 Water abstraction points (weirs, NSDs) were heavily silted with gate valves damaged
- 3.2.9 The affected districts also experienced significant crop and livestock pest and diseases which also negatively impacted production of both crops and livestock.

TABLE 7: EFFECTS OF CYCLONE IDAI ON AGRICULTURE PRODUCTION

Crop/ Livestock/ Infrastructure	Chimanimani	Chipinge	Mutare	Buhera	Nyanga	Makoni	Mutasa	Masvingo	Total
Maize	7 100ha	2 000ha	200ha		15ha			232ha	9 338ha
Banana	1 626ha								1 626ha
Pineapples	131ha								131ha
Plantations(Mango, Oranges &Macadamia)	85ha								85ha
Cattle	303							17	379
Goats and Sheep	384	130							514
Tobacco Barns			200			287		10	489
Dip tanks	13	37	8	4	3	12	9		86

3.2.10 For livestock production, provision of vaccination and drugs for general disease control is required in the short term as well as technical support on veterinary services.

3.2.11 Training and technical support in the whole value chains of most crop and livestock enterprises have also been identified as a priority area

3.2.12 Whilst the cyclone caused extensive damage in Manicaland and Masvingo, in Mashonaland East and central the rains improved crop condition

4. CROP PRODUCTION

4.1. MAIZE

TABLE 8: MAIZE PRODUCTION (MT) BY PROVINCE

PROVINCE	2018/2019	2017/2018	%
Mashonaland West	228 073	461 463	-51
Mashonaland Central	159 184	359 877	-56

Total	5 578 381	5 774 525	481 159	522 955	3 707 357	4 360 838	294 213	278 297

5.2 LIVESTOCK CONDITION

FIGURE 19: LIVESTOCK CONDITION

- The condition of livestock is generally fair to good in most districts across the country

5.3 GRAZING AVAILABILITY

FIGURE 20: GRAZING AVAILABILITY

- Grazing is available to last from four months to eight months in most districts.
- However, some districts in Matabeleland North, Matabeleland South and Masvingo will have serious grazing challenges as grazing availability will last up to 3 months.

- Some communal areas in Mashonaland, Midlands and Manicaland Provinces will have shortage of grazing due to overgrazing and poor veld quality.
- In the worst affected districts, the livestock is currently surviving mainly on browse and crop residues from failed crops.
- Available graze and browse will not be able to maintain the current livestock condition (especially for beef cattle) if drought mitigation measures are not put in place urgently.

5.4 GRAZING CONDITION

FIGURE 21: GRAZING CONDITION

- The grazing condition (quality) is generally fair across all provinces but is expected to deteriorate as the season progresses.

- Cyclone Idai induced rainfall improved the grazing quality and availability in the Mashonaland provinces, Manicaland and parts of Masvingo provinces but unfortunately the Matabeleland provinces which were in need of rainfall did not receive any meaningful rains.

5.5 WATER AVAILABILITY

- Water for livestock was available in most districts at the time of assessment.
- Cyclone Idai induced rains managed to improve the water situation in most water bodies in Mashonaland provinces, Manicaland and parts and Masvingo and Midlands provinces
- However, there are some areas especially in Matabeleland North, Matabeleland South, parts Masvingo and Midlands Provinces that may experience inadequate supplies before the next rainy season which will result in livestock moving for longer distances in search of water.
- A few wards in the northern districts might experience the same problem but to a lesser extent.
- Major sources of water for livestock during the drier are dams, boreholes and perennial rivers.

FIGURE 22: WATER AVAILABILITY

5.6 LIVESTOCK PRODUCTIVITY

5.6.1 CALVING RATES

- The national calving rates remain very low ranging from **38%** in communal areas to **45 %** in the large scale commercial sector against a national target of **60%**.
- Calving rates are lowest in the communal areas of Mashonaland provinces, Masvingo, Manicaland and Midlands but relatively high in the Matabeleland provinces because of relatively good nutrition.

TABLE 49: CALVING RATES FOR 2018 BY FARMING SECTOR

Province	LSCF	A2	A1	SSCF	OR	CA
Mashonaland West	59	42	39	40	35	34
Mashonaland Central	49	43	36	40	33	29
Mashonaland East	45	42	39	48	45	36
Manicaland	42	46	38	38	37	34
Midlands	47	46	49	45	42	44
Masvingo	45	50	49	52	56	43
Matabeleland North	46	48	45	48	39	39
Matabeleland South	42	48	44	46	45	36
National Average	45	46	42	46	42	38

5.6.2 BULLING RATIO

- The national bulling ratio ranges between **1:9** in small scale farming sector and **1:20** in the large scale farming sector against a national target of **1:25**
- The productivity remains low despite the good bulling ratio.

TABLE 50: BULLING RATIO

Province	LSCF	A2	A1	SSCFA	OR	CA
Mashonaland West	17	12	10	10	10	8
Mashonaland Central	15	13	11	11	10	9
Mashonaland East	24	15	12	16	10	9
Manicaland	13	11	6	12	11	9
Midlands	17	18	11	12	10	9
Masvingo	16	17	11	12	10	9
Matabeleland North	25	20	14	17	18	11
Matabeleland South	24	20	17	14	18	11
National Average	20	15	10	12	11	9

5.6.3 CATTLE MORTALITY

- Diseases contributed **69%** to cattle deaths followed by drought **11 %**, predators **8%**, injury **7%** and the remaining **6%** were other causes.
- Tick-borne diseases have significantly contributed to cattle mortality compared to other diseases.

TABLE 51: CATTLE MORTALITY BY PROVINCE

PROVINCE	MORTALITY RATE (%)
Mashonaland West	4
Mashonaland Central	5
Mashonaland East	5
Manicaland	4
Midlands	4
Masvingo	4
Matabeleland North	5
Matabeleland South	5

5.7 LIVESTOCK SLAUGHTERS

5.7.1 BEEF CATTLE SLAUGHTERS AT ABATTOIRS

FIGURE 23a: BEEF CATTLE SLAUGHTER BY PROVINCE

FIGURE 23b: PROPORTION OF BEEF GRADES

- Supply of slaughter stock continues to be dominated by smallholder farmers but quality remains a challenge as most of the meat is falling in the economy and commercial grades
- Cattle slaughters by grade in 2018 show that **84%** of animals slaughtered in Matabeleland were either in Commercial, Choice or Super.

- Highest slaughter figures were recorded in Mashonaland West and Masvingo with **46 444** and **46 357** respectively.

FIGURE 24: CATTLE SLAUGHTER TRENDS

- Number of beef cattle slaughtered increased by **2%** in 2018 compared to 2017

5.7.2 SMALL RUMINANTS SLAUGHTERS

FIGURE 25a: GOAT SLAUGHTERS BY MONTH

FIGURE 25b: PROPORTION OF GOAT SLAUGHTER GRADES

- The predominant slaughter grade is standard accounting for **53%** of total goat slaughters at abattoirs

FIGURE 26a: SHEEP SLAUGHTER FIGURES BY MONTH

FIGURE 26b: PROPORTION OF MUTTON GRADES

- Sheep slaughters at abattoirs remains low (generally below **250 sheep** per month) as supply slaughter from farmers remains low however the quality of meat is high as most of the slaughter sheep are falling into super and choice grades
- Slaughter stock supply is mainly coming from the A2 and LSCF sectors

5.8 LIVESTOCK MARKETING

FIGURE 27: CATTLE AND SMALL RUMINANTS MARKETS

- Most of the livestock is being sold through open markets.
- Regulated markets which offer the best returns are mainly found in the Matabeleland provinces.
- Cattle sales to abattoirs are also quite significant accounting for **22%** of total cattle sales

5.9 MILK PRODUCTION

- Annual milk production has continued on an upward trajectory since 2015 as the national dairy herd continues to grow.
- Total production in 2018 rose by **13.6%** to **75.4 million** litres up from **66.4 million** litres in 2017.

TABLE 52: DAIRY HERD AND MILK PRODUCTION TRENDS FROM 2011 TO 2018

Year	Cows in Milk	Total Production (million litres)
2011	12498	57.3
2012	12498	55.2
2013	12490	54.6
2014	13367	55.4
2015	15611	57.5
2016	16835	65.4
2017	17325	66.4
2018	17968	75.4

FIGURE 28: DAIRY HERD AND MILK PRODUCTION TRENDS FROM 2011 TO 2018

5.10 POULTRY

- The poultry industry significantly rebounded in 2018 following a significant decline induced by the outbreak of Avian Influenza in 2017.
- Broiler Day Old Chick production averaged **7.6 million** chicks a month with a total annual production of **90.8 million** in 2018.
- Large scale average monthly egg production declined by **15 %** to **1.2** in 2018 compared to 2017 while in contrast production in the small scale sector grew by **5%** to **1.8 million dozens**.

TABLE 53: BROILER DAY OLD CHICK PRODUCTION 2016 TO 2018 AND CHICK PRICES

Year	Average Monthly Day Old Chick Production	Price per 100 chicks
2018	7.6 million	\$62
2017	5.7 million	\$76
2016	6.2 million	\$116

5.11 PIG PRODUCTION

- Cumulative pig slaughter figures for 2018 were **173 694** which is **12%** higher than the 2017 figure of **155 181**.

TABLE 54: PIG SLAUGHTER TRENDS 2013 TO 2018.

Year	Total Pigs Slaughtered
2018	173 694
2017	155 181
2016	167 026
2015	140 445
2014	130 523
2013	145 747

FIGURE 29: PIG SLAUGHTER BY CLASS

5.12 STOCKFEEDS SITUATION

- Total amount of stock feeds produced in 2018 was **613 000 MT** which was an increase of **45%** compared to **422 759 MT** produced in 2017.
- Poultry feeds continued to dominate accounting for **76%** in value of manufactured feeds with pig and ruminant feeds at **8%** and **13%** respectively.
- Prices of most raw materials increased sharply in 2018 translating into increases in prices of all stock feeds ranging between **42** to **98%** compared to 2017.

6. ANIMAL HEALTH AND DISEASE CONTROL

6.1. CATTLE DIPPING SITUATION

6.1.1. CATTLE DIPPING

- Dipping was erratic throughout 2018 due to a critical shortage of dipping chemical with most dip tanks managing only **11 dipping sessions** annually instead of the recommended **26 sessions**.
- Priority in the allocation of the limited available dipping chemicals was given to those areas that were badly affected by the outbreak of Theileriosis.
- The other challenges to go with dipping were interruptions due to foot and mouth disease outbreaks where dipping sessions were put on hold to reduce spread of the disease during gatherings; water shortages especially from the month of July to the onset of the rainy season and some that had developed cracks and could not hold water

6.1.2. DIP-TANK CONSTRUCTION/REHABILITATION

- All construction of new dip tanks and rehabilitation of dip tanks were sponsored by development partners, local communities and RDCs.
- Rehabilitation included provision of boreholes, toilets, side tanks and maintenance work on races, roofs and holding pens.

TABLE 55 DIP TANKS CONSTRUCTED/REHABILITATED

Province	Number Rehabilitated	Newly Constructed	Partners
Mashonaland West	68	0	Community
Mashonaland Central	0	1	Mbire RDC
Mashonaland East	8	4	Community, RDC, World Vision
Manicaland	13	0	GOAL, IOM, World Vision, CDF, Community
Midlands	28	0	Community, CDF, ADRA.
Masvingo	19	2	OXFAM, Community, CDF, RioZim, Renco Mine, CESVI
Matabeleland North	37	3	World Vision, UMCORP/WFP, Melana/UNDP, Action AID, USAID/Amalima, COSV
Matabeleland South	14	1	Community, OXFARM, LEAD, WFP, ZRBF
Total	187	11	

5.1.2 TICK-BORNE DISEASES

- The major tick-borne diseases reported were Babesiosis, Anaplasmosis, Heartwater and Theileriosis. The fatality rates were Babesiosis **36%**, Anaplasmosis **21%**, Heartwater **35%** and Theileriosis **66%**.
- There was break down in the national dipping programme caused by severe shortages of dipping chemicals as the manufacturers failed to access foreign currency to import raw materials needed in the manufacturing of dip chemicals.
- Theileriosis hotspots areas included Goromonzi, Chivhu, Bindura, Buhera, Hwedza, Gutu, and Mhondoro-Ngezi with over **50 000 cattle** deaths.

6.2. VACCINATIONS

TABLE 56 VACCINATIONS CARRIED OUT IN 2018.

Province	FMD	Rabies	Anthrax	Newcastle
Mashonaland West	46 696	33 176	50 474	1 211 888
Mashonaland Central	204 460	29 436	55 721	1 505 251
Mashonaland East	173 345	38 292	90 792	1 210 237
Manicaland	124 227	42 474	188 820	999 633
Midlands	468 528	41 326	119 833	893 415
Masvingo	378 734	39 453	95 873	1 004 423
Matabeleland North	87 036	48 570	238 838	530 611
Matabeleland South	150 253	34 416	85 666	706 789
TOTAL	1 633 279	307 143	926 017	8 062 247

6.3. LIVESTOCK DISEASE OUTBREAKS

6.3.1. FOOT AND MOUTH DISEASE

- The year 2018 started with the continuation of the South-Eastern Lowveld cluster disease outbreak which spread mainly due to illegal movements and movements in search of grazing eventually covering twenty districts.
- A new cluster reported in 2018 was around Chegutu cluster which was diagnosed from Mt Hampden Sale Pens in Harare and was traced back to a farm in Chegutu. Infection spread through cattle bought at the pens to four districts and was resolved by November 2018.
- FMD originating from Mozambique was detected in the North East(Rushinga) for the first time and eventually spreading into seven of the nine Mashonaland Central districts, Mashonaland East's Mudzi and UMP districts and some few locations in Hurungwe and Makonde districts in Mashonaland West province.
- The outbreak to the north east was precipitated by movement of Zimbabwean cattle deep inside the Mozambican territory to access water at time when Mozambique was experiencing a serious outbreak of FMD in the area. The disease then spread to Zimbabwe.

FIGURE 31: FMD OUTBREAKS 2018

6.3.2. NEWCASTLE

- A total of **24 districts** reported outbreaks from **80 locations** with **70%** of the outbreaks reported in the last quarter of 2018.
- A total of **6013 birds** were lost to the disease in the smallholder sector. In Matabeleland North the disease was notably reported in Bulawayo urban in the backyard poultry production projects.

TABLE 57: NEWCASTLE DISEASE OUTBREAKS

Province	No. of districts affected	No. of outbreaks	Cases	Deaths	Vaccinations
Mashonaland West	3	5	380	288	1 211 888
Mashonaland Central	2	4	1 691	1683	1 505 251
Mashonaland East	0	0	0	0	1 210 237
Manicaland	2	2	356	218	999 633
Midlands	4	9	831	708	893 415
Masvingo	6	27	1 767	1537	1 004 423
Matabeleland North	3	19	1 757	1331	530 611
Matabeleland South	4	14	1 801	1751	706 789
Total	24	80	8 583	7516	8 062 247

6.3.3. LUMPY SKIN DISEASE (LSD)

- The disease was reported throughout the country. Most cases were reported from February to June, more to the northern region than the drier parts of the country.
- The case fatality rate was about **5%**. The number of dip tanks affected were **1 323** with **11 480 cases** reported and **1 296 deaths** recorded.

6.3.4. BLACKLEG

- Blackleg was reported in all provinces throughout the year with high number of cases in the southern part of the country.
- A total of **1 321** cases were reported and **1 033** deaths recorded.

6.3.5. BOTULISM

- The disease was reported more from the southern provinces, which may indicate shortage of grazing through craving for other things.
- Due to the low available graze in the Matabeleland provinces and parts of Masvingo and Midlands provinces there might be increase of cases in Botulism this year.
- Therefore, farmers should be prepared to vaccinate their cattle.

TABLE 58: BOTULISM CASES BY PROVINCE

Province	No. of outbreaks	Cases	Deaths	Cattle vaccinated
Mashonaland West	2	3	3	1 671
Mashonaland East	2	3	2	6 986
Manicaland	1	1	1	0
Midlands	16	39	13	750
Masvingo	7	8	1	0
Matabeleland North	14	19	10	1 103
Matabeleland South	69	130	53	12 457
Total	111	203	83	22 967

7. RECOMMENDATIONS

7.1. Importation of grain should be prioritised.

7.2. There is need to facilitate access to water by farmers near water bodies, through mapping of these water bodies and existing irrigation infrastructure. Identified challenges need to be addressed appropriately.

7.3. Promotion of low cost supplementary irrigation targeting smallholders

7.4. Capacity building on water-harvesting technology key- rainfall distribution in time is critical.

7.5. Introduce livestock drought feeding program to districts most affected by the drought.

7.6. The Government to reintroduce subsidized stock feed and hay cutting program.

7.7. Beneficiaries of command livestock program to be assisted with stock feed on a loan basis.

7.8. Introduce fodder production in irrigation schemes.

7.9. Government to support local Agro dealers to stock veterinary drugs and stock feed.

7.10. Rehabilitation of boreholes and creation of new water bodies to increase water supply.

7.11. Support to extension services to enhance extension delivery system for increased production and productivity.

7.12. Strengthen the enforcement of legislation guiding the production, contract farming arrangements for horticulture, tobacco and cotton farmers.

7.13. Provide long term financing for revitalization of the plantation horticultural crops sector through establishment of a horticulture revolving fund.

7.14. Promote improved genetic material for horticultural crops to meet market requirements.
